
Using Element States to Center Align Text at a Breakpoint

Created On: August 18, 2022

1. Select the **Text Element** on the Page.

Risus nullam eget felis eget nunc lobortis

2. Select **Element States** below the Stage.

Element States

3. Select the + **card**.

4. The New State panel will open. The first step is to set the State that the element will change to, in this case showing the text as center-aligned.

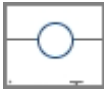

Select all the text - for this example, click the text and we'll select it for you.

Risus nullam eget felis eget nunc lobortis

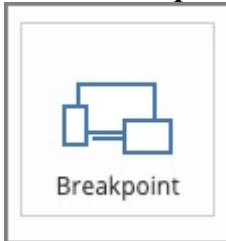

5. Select the **Center Align** option.

6. Select **Trigger Type** (or select Next).

7. Select **Breakpoint**.

8. Select **Set Trigger**.

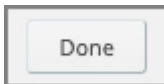

9. Select **Extra Small**.

10. Select **Settings**.

11. Select **Done**.

12. The new State has been added to the Element States panel.
Close the panel by selecting the **X**.

13. Select the **Extra Small** breakpoint icon.

14. The text in the element changes from left-aligned to center-aligned.
